Basel III: A global regulatory framework for more resilient banks and banking systems 3 10. The Committee is introducing these changes in a manner that minimises the disruption to capital instruments that are currently outstanding. It also continues to review the role that contingent capital should play in the regulatory capital framework.

validation of the three key risk components in the regulatory capital calculation: PD, LGD and EAD. Various quantitative validation methods for rating systems and PD estimates are discussed in Section III. The purpose is to provide a general assessment of methods that measure the discriminatory power of a rating system and the performance of the PD quantification (calibration).

~~Studies on the Validation of Internal Rating Systems (revised)~~

Under the Basel II guidelines, banks are allowed to use their own estimated risk parameters for the purpose of calculating regulatory capital. This is known as the internal ratings-based (IRB)

International regulatory framework for managing credit risk Credit Risk Credit risk is the risk of loss that may occur from the failure of any party to abide by the terms and conditions of any financial contract, principally, and market risk. Their key function is to ensure that banks hold enough cash reserves to meet their financial obligations and survive in financial and economic distress.

~~Basel Accords – Overview, Basel I, Basel II, Basel III~~

types of credit, and the set up of their data and systems. Banks using the IRB approach should consider the following areas:
Product offering and pricing. The relative attractiveness of different
