Chemical Process. Chemical processes are integrated with physical processes and are particularly affected by quality related stressors that affect carbon and nutrient cycling and introduce metals, persistent organic contaminants, salts, and toxicants in the water (Wepener and Chapman, 2012). From: Multiple Stressors in River Ecosystems, 2019

Workbook-Richard M. Felder 2005-02-02 This best selling
text prepares students to formulate and solve material and
energy balances in chemical process systems and lays the
foundation for subsequent courses in chemical engineering.
The text provides a realistic, informative, and positive
introduction to the practice of chemical engineering.

As examples of the limited scope of these topics, the treatment of material balances for reacting systems is limited to single process units with one chemical reaction, and the treatment of fluid flow applications is restricted to the use of the mechanical energy balance where friction is mentioned, but friction factors and methods for determining friction losses are not introduced.
